# PRESS RELEASE

15 OCTOBER 2025 | STEINBEIS EUROPA ZENTRUM

# FOR IMMEDIATE RELEASE

Horizon Europe-funded projects united for a climate-resilient and inclusive built environment

*Seven Horizon Europe-funded projects - CARMINE, CLIMRES, MAIA, MINORITY REPORT, MULTICARE, MULTICLIMACT, and RETIME - launch a Joint Manifesto on the Resilience of the Built Environment in 2025, marking a new milestone in joint efforts for climate resilience.*

Stuttgart, Germany - October 15, 2025 - United by a shared mission and a deep commitment to build climate-resilience, inclusivity, and sustainability across Europe, these seven projects have formed a dedicated cluster. Through this alliance, we will coordinate efforts, amplify the impact of individual innovations, and deliver greater value to society as a whole. By joining the force, this clustering shows that **together we are stronger**, building not only resilient environments, but also stronger connections among people, communities, and fresh ideas for a better future. Over two days, participants reviewed progress, shared insights, and planned future actions aimed at safeguarding Europe's built environment against natural and climatic hazards. The assembly featured discussions on innovative solutions, including digital tools and in-field demonstrations, designed to support communities in adapting to climate change.

## A Shared Vision for Europe's Future

The signatories envision a **future-proof built environment** that is inclusive and adaptive to climate risks. The manifesto underscores a commitment to:

- Strengthening local and systemic resilience
- Bridging cutting-edge scientific innovation tools applied in real-world pilots across European pilot sites
- Guaranteeing that every community is included and supported in the climate-smart transition

## Common Principles and Objectives

Grounded in shared values of **inclusivity, transparency, mutual benefit, scientific rigor, and sustainability**, the cluster is committed to:

- **Knowledge Exchange:** Sharing tools, data, and frameworks to enhance interoperability
- **Joint Dissemination:** Coordinating communication, conferences, and media outreach
- **Policy Engagement:** Co-developing recommendations aligned with EU strategies
- **Standardization & Harmonization:** Exploring synergies in methods, indicators, and risk models
- **Community Empowerment:** Advancing citizen-led co-creation through participatory and iterative approaches

## Aligned with EU vision and potential impact

The manifesto reaffirms the projects' alignment with the **European Green Deal**, the **Horizon Europe Missions on Climate, Cities, and Resilience**, and the principles of **Open Science** and the **New European Bauhaus**. Read the Manifesto:

**About MULTICLIMACT:**

MULTICLIMACT is an EU-funded project aimed at safeguarding Europe's built environment against the increasing threats of natural and climatic hazards. By uniting 25 leading European organisations, MULTICLIMACT aims to enhance resilience, sustainability, and safety for communities across the continent. Through innovative strategies, including a toolkit of 20 reliable methods and digital solutions, the project targets the urgent need for adaptive measures against floods, earthquakes, extreme weather conditions and heatwaves. Tested across four pilot sites with diverse climatic conditions, MULTICLIMACT embodies a shared vision for a safer, more resilient future, focusing on actions to reduce the impact of climate change on the built environment.
